

Marbocote Cleaner: A clean mould is essential to enable a semi-permanent mould release agent to give maximum performance. Marbocote Cleaner is a blend of organic solvents designed to make mould cleaning as easy and effective as possible. For its all-round cleaning ability, Marbocote Cleaner has been described as the best on the market.

Marbocote RS415 Mould Sealer: The RS415 Mould Sealer is recommended to seal micro-porosity in composite or aluminium moulds. After cleaning the mould, apply 2 coats of RS415 to prime and seal the mould surface. Following a short cure, the mould is ready for application of the release agent.

Marbocote 75CEE: The Marbocote 75CEE is a general purpose semi-permanent mould release agent. Marbocote 75CEE is designed to release most thermosetting polymers (except isocyanate based polymers and silicones). The 75CEE exhibits a quick dry and cure at room temperature and is typically used to release composite materials. As with all products in the Marbocote range, once cured, the 75CEE gives many releases before re-application is required.

Marbocote TRE 75ECO: The Marbocote 75ECO is a slower drying version of the Marbocote 75CEE. Like the Marbocote 75CEE, the 75ECO is a general purpose semi-permanent mould release agent designed to release most thermosetting polymers. The slower drying nature of the 75ECO enables a high gloss finish to be obtained.

Marbocote GRP ECO: As its name implies, Marbocote GRP ECO is specifically formulated for Glass Reinforced Polymers such as open moulded glass reinforced polyesters and vinyl esters. The GRP ECO enables a high gloss finish to be obtained easily, with minimal effort.

Marbocote 625X: is a combination of semi-permanent resin and microcrystalline wax. The product is applied in a similar manner to a liquid wax, giving the advantages of film visibility, high slip and enhanced gloss finish. As the product also contains a curing polymer, multiple releases per application are also obtained. The product is ideal for applications that prefer the cost benefits of a semi-permanent but also want the ease of use of a wax.

Marbocote Fastcote: Like the GRP ECO, Marbocote Fastcote is specifically formulated to release open moulded glass reinforced polyesters and vinyl esters. The additional advantage is that Fastcote produces an instant gloss finish with no need for polishing.

Marbocote Spraycote: An easy to use spray applied semi-permanent release agent capable of generating an instant gloss and multiple releases per application. The ability to spray-apply makes release agent application up to 20x faster than traditional paste waxes – **and** the Spraycote is durable, meaning that many releases can be achieved before reapplication is necessary. Marbocote Spraycote therefore optimises productivity and reduces cost per part.

Marbocote TRE 45 ECO: Marbocote TRE45 ECO is an aerospace specified product designed to release epoxy, polyester, vinyl ester, phenolic, BMI and other thermosetting resins. The Marbocote TRE45 ECO will not contaminate the released surface, essential when post moulding adhesion processes are involved.
